

SNOWMOBILE DRIVE BELTS

BAD ASS EXTREME DUTY

EX-COMPOUND

- High-temperature, heat-resistant with directionally-oriented fibers.
- Will handle the heat / friction for maximum power transfer through clutches.
- Engineered to keep maximum under-cord stiffness across the belt while giving stable cord construction base and allowing the belt to flex for efficiency and cool running temperatures.
- Helps retain cord line position — won't expand or bulge out under top cog.

CORD

- Next-generation, ultra-strong Aramid fiber cord.
- Can handle / carry more than 10,000 pounds of tension without stretching or breaking.
- Stronger than OEM and aftermarket drive belts.

TOP COG

- Next generation cog design.
- Above-cord strength, flexibility, and heat resistance.
- A must for today's high-horsepower / high-torque motor / clutch applications.

BELT AND SLEEVE

- Complete fitment listing on sleeve and part number on belt ensures correct application.

Available for:

POLARIS *ski-doo* **ARCTIC CAT**  **YAMAHA**
